Independent Accountant's Report

To the Management of Symantec Corporation:

We have examined the assertion by the management of Symantec Corporation ("Symantec") for its Thawte Extended Validation SSL ("EV SSL") certification authority (CA) operations at Mountain View, California, USA; New Castle, Delaware, USA; Melbourne, Australia; Dublin, Ireland; and Cape Town, South Africa, throughout the period June 16, 2016 to November 30, 2016 for its Thawte CAs listed in Appendix A ("the Thawte Root and EV SSL Issuing CAs"):

- Symantec disclosed its EV SSL certificate life cycle management business practices in its Thawte Certification Practice Statement, Version 3.7.16 dated, September 9, 2016 ("Thawte CPS") including its commitment to provide EV SSL certificates in conformity with the CA/Browser Forum Guidelines on the Symantec Thawte website, and provided such services in accordance with its disclosed practices
- Symantec maintained effective controls to provide reasonable assurance that:
 - the integrity of keys and EV SSL certificates it manages is established and protected throughout their life cycles; and
 - EV SSL subscriber information is properly authenticated (for the registration activities performed by Symantec)

based on the WebTrust Principles and Criteria for Certification Authorities – Extended Validation SSL v1.4.5.

Syantec's management is responsible for its assertion. Our responsibility is to express an opinion on management's assertion based on our examination.

We conducted our examination in accordance with standards for attestation engagements established by the American Institute of Certified Public Accountants and, accordingly, included:

- (1) obtaining an understanding of Symantec's EV SSL certificate life cycle management business practices, including its relevant controls over the issuance, renewal, and revocation of EV SSL certificates;
- (2) selectively testing transactions executed in accordance with disclosed EV SSL certificate life cycle management practices;
- (3) testing and evaluating the operating effectiveness of the controls; and
- (4) performing such other procedures as we considered necessary in the circumstances.

We believe that our examination provides a reasonable basis for our opinion.

The relative effectiveness and significance of specific controls at Symantec and their effect on assessments of control risk for subscribers and relying parties are dependent on their interaction with the controls, and other factors present at individual subscriber and relying party locations. We have performed no procedures to evaluate the effectiveness of controls at individual subscriber and relying party locations.

Because of the nature and inherent limitations of controls, Symantec's ability to meet the aforementioned criteria may be affected. For example, controls may not prevent, or detect and correct, error, fraud, unauthorized access to systems and information, or failure to comply with internal and external policies or requirements. Also, the projection of any conclusions based on our findings to future periods is subject to the risk that changes may alter the validity of such conclusions.

Page 2

In our opinion, throughout the period June 16, 2016 to November 30, 2016, Symantec management's assertion, as referred to above, is fairly stated, in all material respects, based on the WebTrust Principles and Criteria for Certification Authorities – Extended Validation SSL v1.4.5.

This report does not include any representation as to the quality of Symantec's services beyond those covered by the WebTrust Principles and Criteria for Certification Authorities – Extended Validation SSL v1.4.5, nor the suitability of any of Symantec's services for any customer's intended purpose.

Symantec's use of the WebTrust for Certification Authorities – Extended Validation SSL Seal constitutes a symbolic representation of the contents of this report and it is not intended, nor should it be construed, to update this report or provide any additional assurance.

**Assertion of Management as to
Its Disclosure of its Business Practices and its Controls
Over its Extended Validation Certification Authority Operations
During the period from June 16, 2016 through November 30, 2016**

February 28, 2017

Symantec Corporation ("Symantec") provides its Extended Validation SSL ("EV SSL") certification authority (CA) services through the Thawte CAs listed in Appendix A ("the Thawte Root and EV SSL Issuing CAs").

The management of Symantec is responsible for establishing and maintaining effective controls over its Thawte EV SSL CA operations, including its EV SSL CA business practices disclosure on its website, EV SSL key life cycle management controls, and EV SSL certificate life cycle management controls. These controls contain monitoring mechanisms, and actions are taken to correct deficiencies identified.

There are inherent limitations in any controls, including the possibility of human error, and the circumvention or overriding of controls. Accordingly, even effective controls can only provide reasonable assurance with respect to Symantec's Thawte certification authority operations. Furthermore, because of changes in conditions, the effectiveness of controls may vary over time.

Symantec management has assessed its disclosures of its certificate practices and controls over its Thawte EV SSL CA services. Based on that assessment, in Symantec management's opinion, in providing its EV SSL certification authority services at Mountain View, California, USA; New Castle, Delaware, USA; Melbourne, Australia; Dublin, Ireland; and Cape Town, South Africa, throughout the period June 16, 2016 to November 30, 2016, Symantec has:

- disclosed its EV SSL certificate life cycle management business practices in its Thawte Certification Practice Statement, Version 3.7.16 dated, September 9, 2016 ("Thawte CPS") including its commitment to provide EV SSL certificates in conformity with the CA/Browser Forum Guidelines on the Symantec website, and provided such services in accordance with its disclosed practices
- maintained effective controls to provide reasonable assurance that:
 - the integrity of keys and EV SSL certificates it manages is established and protected throughout their life cycles; and
 - EV SSL subscriber information is properly authenticated (for the registration activities performed by Symantec)

based on the WebTrust Principles and Criteria for Certification Authorities – Extended Validation SSL v1.4.5.
