

REPORT OF THE INDEPENDENT ACCOUNTANT

To the Management of Symantec Corporation:

We have examined for the Symantec Corporation's (Symantec) Certification Authority (CA) operations at Mountain View, California, USA; New Castle, Delaware, USA; Melbourne, Australia; Cape Town, South Africa; Dublin, Ireland; Sapporo, Japan; and Kawasaki-shi, Japan and for Verisign, Inc. (Verisign), an independent service organization that provides datacenter hosting services to Symantec at the New Castle, Delaware location:

- a) Symantec's disclosure of its SSL certificate lifecycle management business practices in its Symantec Trust Network (STN) Certification Practices Statement (CPS), the STN Certificate Policy (CP), and its disclosure of the services and related controls provided by Verisign as enumerated in [Attachment A](#), including Symantec's commitment to provide SSL certificates in conformity with the CA/Browser Forum Requirements on the Symantec website;
- b) the provision of such services in accordance with the disclosed practices; and
- c) the effectiveness of Symantec's controls and Verisign's controls, where applicable, over
 - key and SSL certificate integrity,
 - the authenticity and confidentiality of SSL subscriber and relying party information,
 - continuity of key and SSL certificate lifecycle management operations,
 - development, maintenance, and operation of CA systems integrity, and
 - meeting the network and certificate system security requirements set forth by the CA/Browser Forum

throughout the period December 1, 2016 to October 31, 2017 for its CAs as enumerated in [Attachment B](#).

Symantec's management is responsible for these disclosures and for maintaining effective controls based on the [WebTrust Principles and Criteria for Certification Authorities - SSL Baseline with Network Security v2.2](#). Our responsibility is to express an opinion based on our examination.

The relative effectiveness and significance of specific controls at Symantec and their effect on assessments of control risk for subscribers and relying parties are dependent on their interaction with the controls, and other factors present at individual subscriber and relying party locations. Our examination did not extend to controls at individual subscriber and relying party locations and we have not evaluated the effectiveness of such controls.

Our examination was conducted in accordance with attestation standards established by the American Institute of Certified Public Accountants. Those standards require that we plan and perform the examination to obtain reasonable assurance about whether, throughout the period December 1, 2016 to October 31, 2017 for the CAs enumerated in [Attachment B](#), in all material respects:

- a) Symantec disclosed its SSL certificate lifecycle management business practices in its STN CPS, STN CP and the services and related controls provided by Verisign as enumerated in [Attachment A](#), including Symantec's commitment to provide SSL certificates in conformity with the CA/Browser Forum Requirements on the Symantec website;
- b) Symantec and Verisign, where applicable, provided such services in accordance with Symantec's disclosed practices;
- c) Symantec and Verisign, where applicable, maintained effective controls over
 - key and SSL certificate integrity,
 - the authenticity and confidentiality of SSL subscriber and relying party information,
 - continuity of key and SSL certificate lifecycle management operations,
 - development, maintenance, and operation of CA systems integrity, and
 - meeting the network and certificate system security requirements set forth by the CA/Browser Forum

based on the [WebTrust Principles and Criteria for Certification Authorities - SSL Baseline with Network Security v2.2](#).

Because of the nature and inherent limitations of controls, Symantec's ability to meet the aforementioned criteria may be affected. For example, controls may not prevent, or detect and correct, error, fraud, unauthorized access to systems and information, or failure to comply with internal and external policies or requirements. Also, the projection of any conclusions based on our findings to future periods is subject to the risk that changes may alter the validity of such conclusions.

In our opinion, throughout the period December 1, 2016 to October 31, 2017, in all material respects:

- a) Symantec disclosed its SSL certificate lifecycle management business practices in its STN CPS, STN CP and the services and related controls provided by Verisign as enumerated in [Attachment A](#), including Symantec's commitment to provide SSL certificates in conformity with the CA/Browser Forum Requirements on the Symantec website;
- b) Symantec and Verisign, where applicable, provided such services in accordance with Symantec's disclosed practices;
- c) Symantec and Verisign, where applicable, maintained effective controls over
 - key and SSL certificate integrity,
 - the authenticity and confidentiality of SSL subscriber and relying party information,
 - continuity of key and SSL certificate lifecycle management operations,
 - development, maintenance, and operation of CA systems integrity, and
 - and meeting the network and certificate system security requirements set forth by the CA/Browser Forum

based on the [WebTrust Principles and Criteria for Certification Authorities - SSL Baseline with Network Security v2.2](#).

This report does not include any representation as to the quality of Symantec's services other than its CA operations at Mountain View, California, USA; New Castle, Delaware, USA; Melbourne, Australia; Cape Town, South Africa; Dublin, Ireland; Sapporo, Japan; and Kawasaki-shi, Japan, nor the suitability of any of Symantec's services for any customer's intended purpose.

During the period, Symantec's internal monitoring processes and various third parties identified issues of noncompliance with respect to the CA/Browser Forum Baseline Requirements Certificate Policy for the Issuance and Management of Publicly-Trusted Certificates version 1.5.1. These issues have been posted publicly in the online forums of the CA/Browser Forum as well as the individual Internet browsers. Symantec's remediation procedures have also been publicly communicated through these forums. These issues, which are enumerated in [Attachment C](#), represent isolated issues and do not represent a systemic impact on the operating effectiveness of Symantec's controls. Our opinion is not modified with respect to these matters.

Effective at the close of business on October 31, 2017, Symantec sold its CA business operations to DigiCert Inc.

Symantec's use of the WebTrust for Certification Authorities Seal - SSL Baseline with Network Security Seal constitutes a symbolic representation of the contents of this report and it is not intended, nor should it be construed, to update this report or provide any additional assurance.

Symantec Trust Network (STN) Certificate Policy	2.8.22	September 9, 2016

Description of Services Provided for Symantec and Related Controls Exercised by Verisign at the New Castle, Delaware Location

Symantec has entered into an agreement with Verisign Inc. (Verisign), to provide datacenter hosting services at the New Castle, Delaware datacenter (the datacenter). Verisign performs the same physical and environmental security controls as Symantec has disclosed in Section 5 and Section 6 of the Symantec Trust Network (STN) Certification Practice Statement; however, Verisign performs UPS maintenance quarterly, rather than semi-annually.

Verisign has implemented the following physical and environmental security controls to protect Symantec assets at the datacenter. Production systems housed in the datacenter are protected by multiple tiers of physical security, with access to the lower tier required before gaining access to the next highest tier. The datacenter enforces individual access control through the use of two-factor authentication, including biometrics. Physical access to the datacenter is automatically logged. Visitors to the datacenter are required to sign a log at the security office, wear a visitor badge, and be escorted while onsite. The datacenter facilities are manned continuously by on-site security personnel and the premises are continuously video monitored and recorded. Multiple generators, UPS, HVAC and fire suppression systems have been implemented at the datacenter.
